

UNNAT BHARAT ABHIYAN CELL 2022-23

Unnat Bharat Abhiyan Cell NLUO is elated to share its progress in the outreach programmes conducted by it and the prime focus being education sector of the children of our adopted villages during and posts COVID Pandemic. During the unprecedented time of COVID-19 when everyone was having restriction to resources, a lot of segments got tampered one of such being the education sector. It suffered a huge crunch as because schools were not accessible students were lacking the knowledge and resources to acquire such knowledge.

Highlighting such issue, the UBA Cell members took the responsibility to bridge this gap which was there due to non availability of resources and came up with the idea to provide education to the students who were in need. Having a sole motive that education should not suffer due to any issue the Cell member chooses online medium to educate the students through providing education videos to students of class 10th specially as they were having their board exams in the month of February and March 2021-22.

We decided to make this learning process easy for the students. We chalked out our plan accordingly and decided not only to make videos but also prepared compendium which comprises of all the matter required for exam. Secondly it was in compliance with the video we uploaded on the official channel. By having these two segments, one being the compendium and second the videos, the Cell successfully tried providing the medium for students stuck at home due to lockdown worldwide.

Self-prepared lecture videos by UBA Cell NLUO helped **85+ students across our 5 adopted village to score exemplary results by studying from the videos uploaded and available on our official YouTube channel.** Also, these lecture videos along with the set of compendium and FAQs were being circulated in the schools of our villages to provide more easy accessibility to them. Moreover, the Cell has created Digital Channel group with these children, mainly from secondary and higher secondary, in order to provide them and share the prepared lectures. The Cell tries its best to disseminate these recorded lectures and videos via help of contacts and resource persons across these 5 adopted villages.

Providing and enhancing such resources we are delighted to say that all the efforts that our Cell members had given came to a successful departure. Each and every student had free access as the content was available 24x7 and students used such resource in very successful manner and achieved the desired result.
